

SMART REASON

#45

WE INSTALL & SERVICE TANKLESS WATER HEATERS.

At **Smart Plumbing**, we install and repair tankless water heaters for both residential and commercial customers. Different than conventional water heaters, tankless heaters only heat water when a fixture is in use, as opposed to storing hot water at all times.

HOW DO TANKLESS WATER HEATERS WORK?

Tankless water heaters instantly heat water as it's being used, taking less time to heat water than other types of heaters. Because they don't run all the time, they save more energy than other types of heaters. Heating water as it flows, tankless heaters virtually produce an endless amount of hot water.

GOING GREEN CAN SAVE YOU GREEN.

Not only do tankless water heaters save energy, they can also save you money through a reduction in fuel costs and a Federal tax credit.

I'M A BUSINESS OWNER. CAN I INSTALL A TANKLESS WATER HEATER?

Our knowledgeable technicians can provide you with options for your specific needs and efficiencies. In addition, our tankless water heaters can save you money and energy.
